Monoclonal Antibody To Mouse CD205

Marker For Mouse Nonlymphoid Dendritic Cells (DEC-205)

Monoclonal antibody NLDC-145 identifies Ia positive interdigitating cells, veiled cells and Langerhans cells of the skin and their *in vitro* counterparts. The antigen is expressed at high levels by dendritic cells and thymic epithelial cells. The antigen detected by NLDC-145 is an integral membrane glycoprotein with an apparent mass of 205 kDa, also known as DEC-205. DEC-205 is apparently a receptor involved in antigen-processing by dendritic cells.

Product Number:	T-2013
Clone:	NLDC-145
Host species, isotype:	Rat IgG2a
Quantity:	100µg
Format:	Affinity purified, lyophilized Reconstitute by adding 0.5ml distilled water. This stock solution contains 0.2mg/ml IgG, phosphate buffered saline pH 7.2 (PBS), 5mg/ml bovine serum albumin (BSA) as a stabilizer and 0.02% sodium azide as a preservative.
Stability:	Original vial: 1 year at 4° - 8°C Stock solution: 1 year at -20°C. Avoid repeated thawing and freezing.
Applications:	Tested for immunohistochemistry (IHC); has been described to work in FACS. Approximate working dilution for IHC: Frozen sections: 0.5µg/ml (1:400) Paraffin sections: does not react on routinely processed paraffin sections. Optimal dilutions should be determined by the end user. Suggested positive control: Mouse spleen.
Immunogen:	mouse lymph node tissue.
Antigen, epitope:	The antigen is a protein of 205kDa molecular weight (DEC-205) which is localized on the cell surface and intracellularly. The epitope has not been further characterized.
Antigen distribution:	

Organ	NLDC-145 staining	Cell type and localization

Spleen	+	IDC in inner PALS
Lymph node	+	IDC in paracortex VC in subcapsular sinus
Peyer's patch	+	IDC in interfollicular T cell areas Villum epithelium, isolated cells in submucosa (VC)
Thymus	+	IDC in medulla Cortical epithelium
Skin	+	Langerhans cells
Brain, Kidney, Liver, Heart	-	
In vitro isolated cells		
Blood, bone marrow	-	
Peritoneal cells	-	
Peritoneal exudate cells*	+	some positive cells (VC?)

* Peritoneal exudate cells were harvested 4 days after intraperitoneal thioglycollate injection.

Tests were carried out on BALB/c and C₃D₂F₁ mouse strains.

(G.Kraal et al. see ref. 1, modified)

Specificity:

Mouse: nonlymphoid dendritic cells: interdigitating cells (IDC), veiled cells and Langerhans cells, thymic epithelial cells.

Other: not tested
